At the Core of Excellence

Behind every perfectly finished moulding is a high-performance core. Uniboard's MDF Excel is engineered for optimal machining, superior density, and a smooth surface that enhances every detail. Manufactured in North America with the highest quality standards, it ensures stability, durability, and consistency — the foundation for exceptional results.

Produced from 100% recycled and recovered wood fibers, Uniboard's MDF panels are eco-friendly. They are carbon neutral because the fiber particles encapsulate CO2 that would otherwise remain in the atmosphere.

WHERE INNOVATION MEETS PERFECT MATCH

To complement Uniboard's high-quality TFL panels, our partner Transform has developed a revolutionary wrapping technology: **PurTflex™**. Specifically designed for superior performance, PurTflex involves extruding a thin layer of polyurethane coated with a UV finish onto a specially treated decorative paper — delivering unmatched flexibility, durability, and precision.

What sets PurTflex apart is its unique ability to wrap 90-degree angles without cracking or showing white crease lines, unlike traditional polyester or laminate options.

The result? A flawless, seamless finish that perfectly mirrors the beauty of Uniboard® colors. This exclusive technology ensures every moulding lives up to the high standards of our panels — creating a cohesive, top-tier design solution.
