

Eco-Friendly.
Produced from recycled wood fibers.

Produced from 100% recycled and recovered wood fibers, Uniboard®’s MDF panels are eco-friendly. They are carbon neutral because the fiber particles encapsulate CO₂ that would otherwise remain in the atmosphere.

Uniboard® also manufactures its own resin, resulting in a **superior MDF product.**

Nothing Compares
to our Fiber
in North America!

Uniboard® was one of the first in North America to introduce Super Refined MDF, setting a new benchmark for precision and quality.

Our advanced MDF panels are engineered to meet the highest standards, offering unparalleled smoothness and consistency for a flawless finish.

Our secret component:
Black Spruce Fiber.

Black spruce is a wood species known for its strength and homogeneous texture, which contributes to the quality of MDF panels.

Black spruce fibers provide uniformity in panel density and texture, beneficial for manufacturing high-quality finished products.

In addition to its strength, black spruce is also prized for its lightness, which facilitates handling during production and transport. This unique combination of lightness and strength allows for the creation of durable yet versatile MDF boards, ideal for a wide range of applications in construction and design.

redefining wood®

Uniboard®’s
MDF Meets
Every Need!

MDF Product Portfolio

We offer one of the most Comprehensive Lines of MDF.

Over the past several decade, we have added to our portfolio of **specialty MDF products**. Our Excel+® and now Excel+® MAX are benchmarks in the industry against which high routing boards are judged. Our excptionally broad range of matrix sizes across all grades allows for complete truck or railcar loads with an assortment of MDF products.

Please refer to uniboard.com for current information regarding certifications, full environmental data sheets and green rating system contributions. Although the information in this document is presented in good faith and believed to be correct, Uniboard makes no representations or warranties as to the completeness or accuracy of the information. Uniboard® shall have no liability for any errors or omissions contained therein or for any consequences of same.

The First North American MDF Mill to install a continuous press.

We have a strong history **since 1989** of producing high quality MDF to support our clients' growth.

- 1987
First North American MDF mill to install a continuous press.

- 1988
Construction of the Unires factory to produce our own resin.

- 1996
Uniboard® maintains its leadership position in MDF in North America with production of **150 million sq ft** per year.

- 2019
Uniboard® adds a wood fiber dryer with innovative technological expertise in clean air and greenhouse gas reduction, thereby **reducing the company's CO₂ emissions** and increasing production capacity.

- 2020-2025
Uniboard® develops five new specialty grades of MDF to become the North American leader.

Uniboard® is the only North American owned MDF manufacturer to offer laminated MDF in 165 colors and 15 textures.
