Eco-Friendly.
Produced from recycled wood fibers.

CARBON NEUTRALITY AMPLIFIER

Produced from 100% recycled and recovered wood fibers, Uniboard®'s MDF panels are eco-friendly. They are carbon neutral because the fiber particles encapsulate CO_2 that would otherwise remain in the atmosphere.

Uniboard® also manufactures its own resin, resulting in a **superior MDF product**.

Nothing Compares to our Fiber
in North America!

Uniboard® was one of the first in North America to introduce Super Refined MDF, setting a new benchmark for precision and quality.

Our advanced MDF panels are engineered to meet the highest standards, offering unparalleled smoothness and consistency for a flawless finish.

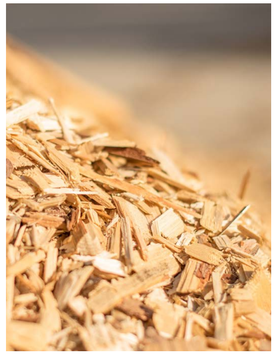

Our secret component: **Black Spruce Fiber.**

Black spruce is a wood species known for its strength and homogeneous texture, which contributes to the quality of MDF panels.

Black spruce fibers provide uniformity in panel density and texture, beneficial for manufacturing high-quality finished products.

In addition to its strength, black spruce is also prized for its lightness, which facilitates handling during production and transport. This unique combination of lightness and strength allows for the creation of durable yet versatile MDF boards, ideal for a wide range of applications in construction and design.

UNIBOARD®

Uniboard®'s **MDF** Meets Every Need!

MDF Product Portfolio

We offer one of the most **comprehensive lines of MDF.**

Over the past several decades, we have added to our portfolio of **specialty MDF products**. Our Excel+® and now Excel+® MAX are benchmarks in the industry against which high routing boards are judged. Our exceptionally broad range of matrix sizes across all grades allows for complete truck or railcar loads with an assortment of MDF products.
